

ZIPLINE[®] SKY

HORIZONTAL OUTDOOR
SCREEN SYSTEMS

FERRINI
WE DIRECT THE LIGHT & LIFE

Technical Catalogue

The Zipline outdoor screen system can be applied to restaurants, cafes, shopping malls, shops, villas, or any type of building desired. It is a system controlled by remote or button and is preferred to reduce the effects of the sun in the area. Its extra protective fabric is produced to provide complete resistance to all external factors, impacts, water, sun, snow, and wind.

Discover the most stylish and convenient way to protect yourself from the sun with next-generation outdoor screens.

PROFILE DIMENSIONS

Box

Bottom Profile

Thanks to the special spring system within the Bottom Profile, it allows the fabrics to be more taut. With its unique design that allows it to pass through and hold onto the fabric, it is an element that integrates the system. It clings to seams thanks to the plastic plugs on its sides.

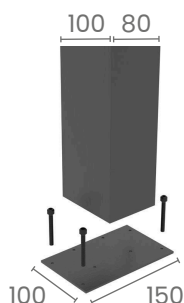

Guide Profile

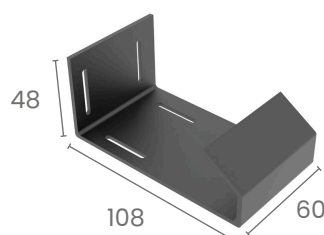

The Side Guide Profile has a structure made of a single piece. It integrates the spring system holding strings and the PVC profile holding the fabric. Its design offers ease of installation.
